

Training for transport and traffic professionals. Learn it today. Apply it tomorrow.

A bold statement, right? One we intend to make true as of today! Traffic and transport professionals around the globe can pan out, learning from proven Dutch design principles and policy-making, while immersing themselves in the 'Dutch experience'. This premise is the basis of two practical 5-day trainings offered by DTV Capacity Building. This year, we offer a training Cycling Infrastructure and a training Road Safety with multiple start dates.

Municipalities and regions worldwide increasingly struggle with problems concerning sustainability, the limits of their infrastructure and broad challenges concerning the quality of life. Governments need to act, and soon. New policies and strategies are needed to tackle these problems. However, in many cases they have little experience in topics such as sustainable mobility planning, effective road safety policies and designing a working cycling infrastructure.

Immerse yourself in the 'Dutch experience'

This is where can help professionals, working on solutions for traffic and transport challenges. Benefit from years of experience in making things work. The Netherlands is well known as the number one cycling country. Every Dutchman (and woman) owns at least one bicycle. Living in a densely populated country has also forced us to implement smart and effective strategies to keep our roads safe for all road users. We strongly believe that immersing yourself in the 'Dutch experience' helps professionals understand the underlying principles and the choices that have been made. That is why we offer training courses based in the Netherlands.

Come home with directly applicable knowledge and skills

For these training courses, experts in various disciplines such as policy-making, planning, design, and safety have been brought together. The programme is designed on the concept of action learning. Concepts are explained by experienced trainers and guest speakers and supported by practical examples, observed in field trips, and applied in exercises. Field trips consist of visits to and observations in the cities of Amsterdam, Rotterdam and Breda. After five days of training, participants are ready to use what they've learned right away.

About us

DTV Capacity Building is a brand of leading Dutch-based traffic engineering consultancy DTV Consultants. The firm has over 30 years of rich experience in the field of safe and sustainable mobility. Our extensive networks of people and organisations offer unique access to both national and international platforms.

At DTV Consultants, we create and employ various tools and forms of smart technology to tackle many challenges in the field of traffic engineering. We are also fully committed to the human aspect, which is why we have chosen to invest in honing and furthering our knowledge of human behaviour in relation to traffic and mobility. In particular road design and vulnerable road users such as pedestrians and cyclists.

Capacity Building

A special feature of DTV Consultants is its extensive educational experience: we organize and teach over 50 different courses in the field of traffic and transport in the Netherlands on Bachelor and Bachelor-plus level. Our mission for capacity building activities is to teach professionals in such way that they can apply to their own local situation the following day.

We have knowledge on how to develop, implement and accredit educational programs for professionals. We have certified training programmes in the Netherlands – ie on road safety auditing, and traffic planning, but also organized trainings and certifications for the European Commission and clients in Africa and Australia.
